

Formula IV Plus (Multi & Tre-en-en)

Formula IV consists of 2 multivitamin and mineral; and sterol tabsules.

Formula IV Plus consists of the Multi tablet, which contains the multivitamin and mineral part (excluding iron) and a Tre-en-en gellous tabsule, packed in a practical cellophane wrapper. The Tre-en-en tabsule contains three times more of the same oils found in the F IV tabsule.

Through food procesing we ensure that food last longer on the shelf or in the freezer. Certain nutrients that cause and speed the decay are removed. In the process we remove part of the nutritious value of food, like the energy-giving oils. By removing lipids and sterols we undermine our energy levels and the health of our cells and thus the chain of life becomes as strong as the weakest link.

Even good foods are not spared. They lose their natural goodness by being stored, transported over long distances and by being prepared.

You eventually become what you eat. You are as healthy as the sum total of your cells.

You need lipids and sterols to protect your cell membranes. Without it they become impermeable. Nutrients can't get in and waste can't get out and so your health becomes compromised.

Already at an early stage scientists realised it is not good enough to claim that a supplement consists of certain nutrients. The question that should be answered is whether those nutrients are bio-available or are they just floating around in the blood stream? Nutrients never become nutrition if they don't enter cells for metabolism. Therefor GNLD believes in the blueprint of nature to supply whole-food based products. Nature ensures all the microelements for bioavailability. Formula IV and Tre-en-en are manufactured with these requirements in mind.

In 1958 GNLD did a breakthrough study on chronic fatigue. The research indicated that people with chronic fatigue benefited dramatically when they received a unique blend of plant lipids and sterols.

This formula became known as Tre-en-en (Three-in-one) Grain Concentrates. Until today this is a world first and a unique formula. The plant oils (phyto sterols) that are removed to refine foods are returned into the diet, ensuring cellular nutrition. Omega 3 and Omega 6, both part of the Tre-en-en composition, are needed for a healthy cell membrane.

It is forbidden to take animal steroids or hormones, but the human body needs plant hormones, in the form of sterols. Your hormones come from a physical food link and they determine who you are and control your bodily functions. However, you need hormone precursors, which come from plants. Phyto sterols are building blocks for prostaglandins, the communicator of the cell. They are eventually, through DNA function, instrumental in forming particular needed hormones for e.g. the pituary gland, ovaries, adrenals etc.

Theses sterols caused a 168% increase in the forming of oestogen in a particular study and another a 50% improvement in nutrient uptake, even by eating the same food.

Tre-en-en is of great benefit for active people like sportsmen and women who rely on high energy levels to succeed. They take in a lot of extra calories in the form of carbohydrate sports drinks, which most of the times are empty, non-nutritious calories. They do not supply the needed oils for the healthy cell membrane. Tre-en-en helps the body cope with this anticipated deficiency. Since energy combustion takes place in the cell active people generate copious amount of waste products. Endurance, peak performance and immunity are eventually compromised due to the impermeability of the cell membrane to rid the cell of toxins.

By taking Formula IV Plus daily you are taking out a dietary insurance. By doing this you can be sure that you are covering the dietary and nutritional gaps in your diet and are ensuring your optimum level of energy.
